

SGM3145

8-Channel PWM Dimming Charge Pump White LED Driver

GENERAL DESCRIPTION

The SGM3145 is a current-regulated white LED driver with integrated low dropout current sources and a high efficiency charge pump. The charge pump has automatically selectable 1×/1.5× fractional operation modes. The SGM3145 is well suited for white LED applications powered by a Li-Ion battery due to small equivalent open-loop resistance in 1× mode.

The supply voltage operates from 2.7V to 5.5V. The SGM3145 supports up to 8 LEDs for 27mA maximum current per string. The LED reference current is set through an internal resistor. PWM dimming interface allows programmable LED current levels from 0mA to 27mA for brightness control. If the EN pin is logic low, the SGM3145 enters shutdown mode. Built-in soft-start circuitry avoids excessive inrush current during startup and mode transition.

The SGM3145 is available in a Green TQFN-3×3-20L package. It operates over an ambient temperature range of -40°C to +85°C.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

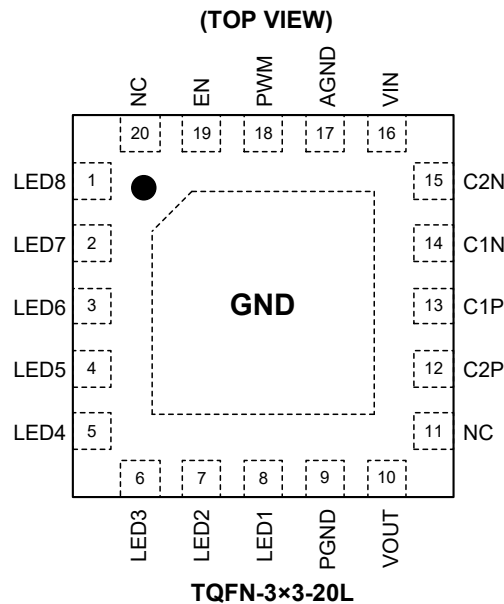

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

1 - 8	LED8 - LED1	I	Current Sink Input. Connect to the cathode of the corresponding LED.
9	PGND	-	Power Ground Pin.
10	VOUT	O	Output Voltage Source. Connect to the output capacitor and the anodes of the LEDs.
11, 20	NC	-	No Connection.
12	C2P	-	Positive Terminal of the Flying Capacitor 2.
13	C1P	-	Positive Terminal of the Flying t Capacitor 1.
14	C1N	-	Negative Terminal of the Flying Capacitor 1.
15	C2N	-	Negative Terminal of the Flying Capacitor 2.
16	VIN	I	Input Supply Pin.
17	AGND	-	Analog Ground Pin.
18	PWM	I	PWM Dimming Input. Duty cycle = 0%, $I_{OUT} = 0\text{mA}$; duty cycle = 100%, $I_{OUT} = 27\text{mA}$.
19	EN	I	Active-High Enable Pin. Pull EN high to enable the device, and pull EN low to disable the device. In normal operation if V_{IN} ramp-up is slow, it is recommended to connect EN to V_{IN} only after V_{IN} has settled.
